

SERVICES TO ENSURE SUCCESS

Efficient, secure data exchange means better service for your clients and more business for you.

We offer multiple services and tools that are secure, easy to implement, and cost effective. Combine this with our expert project management team for a complete turnkey solution.

Lab Services Success Management (LSSM)

Flexibility, adaptability, consistency: this is the power of LSSM. Your healthcare firm gets access to core services with a custom level of engagement, so you pay for only the support you need.

Virtual CIO

A proactive approach that dedicates a portion of a CIO executive's time for active integration with business operations and IT on strategic and tactical projects, and can even include staff evaluations.

Information Technology Assessment

We'll conduct a full IT data center review of hardware, networks, security, personnel, workflows, processes and procedures to ensure your investments are working at their best. Whether onsite or virtual, we focus on your strategic goals and deliver tailor-made solutions.

Software Development

Our specialists develop focused, efficient applications for your environment. Let us create a software solution that replaces manual processes, improves your workflow, and doesn't become something you have to work around.

Cloud-Based Interface Capabilities

Our team of IT professionals are experts hand-picked from the industry, each with over 20 years of experience. Their expertise in lab-to-client interfacing, instrument-to-LIS interfacing, LOINC[®] coding, ICD-10 compliance evaluation, and test dictionary maintenance give you support when you need it, without overhead of a full-time employee.

Remote Systems and NOC Monitoring Solutions

With robust remote controls, you can manage vital network systems, and maintain critical infrastructure.

- Performance monitoring alerts for potential issues/failures
- Full systems and network monitoring to meet optimal performance standards
- Robust tools for managing alert criteria and performance standards
- Alert and escalation procedures customized for client organization

System & Network Upgrades

We handle advanced, complex and fail-safe hardware upgrades and seamlessly integrate them into your current system. We've raised the efficiency and productivity of data centers of all levels of complexity, all done cost-effectively.
